ABSTRACT

D'one Collection is a clothing store located on Jl. Dolok Sanggul, Siborong - Borong, Pasaribu, Dolok Sanggul, Humbang Hasundutan Regency, North Sumatra 22457. A web-based sales information system is one of the right solutions in marketing the products in the D'one Collection. The system that is currently running at D'one Collection is still manual, namely by direct encounters between sellers and buyers, so if you want to buy or order products from D'one Collection, you must come to the place and make transactions. The design of this system is carried out using the waterfall method which is structured from needs analysis, system design, program code writing, program testing and program implementation. The coding system uses the PHP programming language and MySQL as the database. This system will later help sales in the D'one Collection to grow in sales.
