ABSTRACT

The Borobudur District Religious Affairs Office is an office under the Ministry of Religion of the Republic of Indonesia which is directly in charge of carrying out wedding services for the community around Borobudur District. Marriage registration at the Borobudur District KUA still uses the manual registration method by means of the bride and groom visiting the Borobudur District KUA and then registering face to face with the KUA officer. The data to be entered is sometimes very large, so that it is possible for data collection errors to occur. This study aims to develop a Web-Based Marriage Registration and Referral Administration System. The development of this system is a good approach towards increasing the ease of access for employees at KUA Borobudur. The research method used is planning, system analysis, design, implementation. This system is made using the PHP programming language and the database used is Mysql. Test results that the system can run and function properly.

Keywords: *Information System, Marriage Registration Administration & Referral.*
