## **ABSTRACT**

*The progress of a world full of wealth is not far from the source belonging to the entrepreneur. The entrepreneur in question is a limited liability company entrepreneur. Limited partnership is the driving force in the business of selling products from the ordinary to the extraordinary. The city of Yogyakarta is a suitable place to become a medium-sized entrepreneur like a limited liability company. Profits are derived from direct sales of products. Product limited companies are sometimes still not integrated like a superior sales information system. The various methods used are still using the old methods that are still lagging behind to continue to be straightened out. The design and manufacture of an online Sales Information System is expected to be able to display a picture of indirect sales that can be enjoyed by all users of limited liability companies. The presentation of information in the form of a website will make it easier for users to operate it. The development of limited liability companies displayed in this system uses Codeigniter as a framework, Bootstrap as a template and the software used in building this application is PHP (Pear Hypertext Preprocessor) as a programming language, MySQL as a database server, Macromedia Dreamweaver 8 as a support and Api Raja. Postage as information on shipping costs intended for the Jogja Surya Selaras Limited Liability Company. This Jogja Surya Selaras Company information system is a system that provides information to users regarding the optimized Jogja Surya Selaras Limited Liability Company Sales services and their supporting facilities. The information presented on this website is in the form of seller information and buyer information.*
