ABSTRACT

South Halmahera 16 Elementary School is one of the state education institutions with B accreditation. South Halmahera 16 Elementary School strives to improve quality both in terms of achievement and service. However, there are some obstacles in the assessment procedure where the teacher must deposit student scores to the administrative staff. Administrative staff will process grades to be used as student assessment reports. This requires a double assessment process from teachers and administrative staff while the assessment report must be published immediately according to the school's agenda. SD Negeri 16 Halmahera Selatan requires supporting facilities to facilitate student assessment. The system created contains information on student data, teachers, and administrative staff. It is hoped that with this system the assessment process does not take much time according to the school's agenda.
