ABSTRACT

Subur Elektronik is a shop whose business activities sell various kinds of household electronic products such as lights, fans, and others. The buying and selling process at Subur Elektronik only occurs in stores, so that consumers who are outside the Malajengka area to continue shopping are difficult. To overcome these problems, business actors must be able to innovate by changing transactions from conventional to digital. This study aims to build a Web-based Sales Application (E-Commerce) with a payment gateway method so as to produce an online store that is simple, lightweight, but reliable in meeting the needs of sellers, using different applications and platforms. The programming language used to develop this sales system is PHP and HTML and for database processing using MySQL. The web server used is Apache.

Keywords: *Sales, E-Commerce, Paymeny Gateway, Website, PHP, MySQL*
