**ABSTRACT**

*Implementation of Payment Gateway in the online rental system is a system that aims to make it easier for consumers to rent a product without having to come to the seller. Dovanos is a place of business located on Jl. Sumatra, Rt 025/008 Kauman, Sragen Wetan Village, Sragen Regency, Central Java which serves various kinds of cars. Dovanos itself does not yet have a system that can handle car rentals online. After knowing the existing problems, a car rental application is designed, namely the design of a web-based online car rental system that will be created as a website application for a means for business owners to be able to rent products online along with rental reports from online rentals. The design of this system will use CSS, Html, PHP and MySQL as support. This web-based online rental system is a system that functions to rent products online, especially to introduce Dovanos to the wider community, both in Sragen and in other cities. This system will focus on the online rental system and website for Dovanos so Dovanos has its own website and online rental system along with online rental reports.*
