ABSTRACT

Best Accu Store is a business that is engaged in the sale of various types of batteries which in data management and transactions still use a manual system. Currently, Best Accu Store manages data and transactions by copying data and transactions from books to Microsoft Office Excel so that a problem arises in data processing and sales transactions. This system takes a long time in the process and the accuracy level is not optimal. To improve service quality, Best Accu Store requires the implementation of an efficient, effective, and valid system. The application of a Web-Based Point Of Sale System at the Best Accu Store is useful for managing data and transactions, so that in this study a more effective, efficient and accurate data and transaction management system was created. This system uses the PHP programming language and MySQL database.
