### **ABSTRACT**

*Business transaction reports are an important factor in the development of a business. A common problem that exists in businesses is errors in transaction reports because the recording of reports is done manually. For that we need an application that can present transaction report data from a company quickly and precisely. Through the reporting application, you can view transaction reports that occur easily and in a short time. The system can present existing transaction reports quickly and reduce errors that occur. AIDI STORE is a quota voucher wholesale business located in Jepara. AIDI STORE still uses the manual method of recording transaction reports which results in errors in recording transactions and loss of transaction data. By implementing a reporting system, it is hoped that transaction reports can run well and can produce transaction reports quickly and precisely so that they can develop more.*
