DESIGN AND BUILD A WEB-BASED ONLINE REGISTRATION SYSTEM FOR NEW STUDENT

(Case Study: TK Aba Al Amin Pasaranom Purworejo)

ABSTRACT

TK Aba Al Amin Pasaranom is a Kindergarten educational institution owned by the Muhammadiyah foundation having its address in Pasaranom Village, Grabag District, Purworejo Regency, Central Java Province. At this time, at TK Aba Al Amin Pasaranom, the entire registration process and data management for new students do not yet have a good information and management system. Everything from knowing when the registration opens for parents of prospective new students must go to the school directly, and data collection for new students is still done with a notebook. This often results in misunderstandings in receiving information and recording errors in data for new students. To improve the service quality of Aba Al Amin's Kindergarten, Pasaranom requires a web-based registration information system for new students. In designing the school registration system, it was created using Sublime Text, MySql and XAMPP software. Using XAMPP, the application packages we need to develop a good site, Apache Web Server, PHP and MySql, are available. This web-based new student registration application system further assists performance in managing the new student registration process at Aba Al Amin Kindergarten Pasaranom Purworejo.
