### ***ABSTRACT***

*Sindas, Pancuranmas is an area that is developing in the trade sector in Magelang Regency. Yanti's shop is one of the companies that produces bakery products in its business, but in managing the transaction data, there are still many obstacles to produce information. In the management and manufacture of transaction reports which are still done manually and require quite a long time, as well as calculations for the selling price of the bread products made. Therefore, through the design and manufacture of an application program using the cost plus pricing method, it is hoped that it will make it easier to determine the selling price that maximizes sales profits, making sales transaction reports using the Pascal programming language supported by a MySQL database. The system using the cost plus pricing method is a system that provides an optimal calculation of the selling price of goods with the desired profit to Yanti Stores and also reports.*
