Abstract

This study aims to analyze the effect of the current ratio, debt equity ratio, return on investment, and total asset turnover on stock prices in companies listed on the LQ45 index on the IDX for the 2019-2021 period. The method used in sampling is purposive sampling with 36 companies as research samples. The analytical method used is multiple linear regression analysis. The results showed that the current ratio has a negative and significant effect on stock prices, the debt equity ratio has a negative and significant effect on stock prices, return on investment has a positive and significant effect on stock prices, and total asset turnover has no significant effect on stock prices, and simultaneously current ratio, debt equity ratio, return on investment, and total asset turnover have a significant effect on stock prices.

Keywords: *Current Ratio, Debt Equity Ratio, Return on Investment, Total Asset Turnover, and Stock Prices.*
