

ABSTRACT

An information system is a system that collects data to be processed and has many uses. In this case, the data provided is the design of a library information system that is used to make it easier to borrow books which are a source of knowledge. At the SMPN 2 Giritontro Wonogiri Library, borrowers or members can get information about the collections available in the library easily. In addition, the loan process can now be computerized. That way the loan process can be done quickly, easily and in a structured manner. Likewise, the return system is carried out easily, quickly and efficiently. The existence of this information system can facilitate the process of returning and borrowing books and can produce a fast and accurate process.
