# *ABSTRACT*

*Tngr Deadly is a type of business engaged in fashion where all activities use a conventional system, because Tngr Deadly does not yet have a computerized system. Tngr Deadly often encounters difficulties when processing sales data due to the inaccuracy of recording what products and catalogs were sold on that day, how many products were sold on that day, and how much income and expenses were on that day. Because of these problems, a clothing sales information system design is needed at Tngr Deadly. With the existence of a website-based clothing sales information system at Tngr Deadly, it is hoped that it can help process transactions, manage goods data and display transaction or sales reports. This clothing sales information system application is website-based so that it is expected to be a means to market products more broadly in order to increase the number of buyers at Tngr Deadly, Demangan. The output or outcome of this website-based clothing sales information system is in the form of a design document which can later be used as a guide in the development, implementation and development of a sales information system.*
