ABSTRACT

Processing value is a data obtained from a series of activities to produce the final value. In the assessment required a system to provide convenience in managing supporting data to be able to see the final results of the assessment accurately. The final value can be a reference in a process to increase effectiveness in doing things so that in the next process you can get the final value that is appropriate or desired. Data that can be obtained at Muhammadiyah 1 Seyegan Middle School is in the form of related values based on achievements during the ongoing assessment process and produces a number or value data. Value data processing can be in the form of knowledge assessment and skills assessment which can produce a final value. The process of conducting an assessment can be taken from several supporting activities such as learning and activities outside of learning or what is called extracurricular activities. In carrying out the assessment process it will be more effective if these data can be managed into a container in the form of a system that can facilitate the teacher's assessment process. The results obtained can be in the form of reports obtained from several assessments such as assessments based on assignments, quizzes, activities, UTS (Mid Semester Examination) and UAS (Final Semester Examinations) which are grouped together in a final report. From these results, it can make it easier for the school to increase effectiveness in the learning process and value processing which can be taken into consideration in making decisions regarding improvements in the teaching and learning process.
