ABSTRACT

Darunnajah Islamic Boarding School is a salafiyah-based educational institution located in Wonosobo Regency. Registration is an important activity for the Islamic boarding school to get new prospective students. Registration of students is carried out conventionally at the Darunnajah Islamic Boarding School causing the registration committee to experience difficulties in managing data that is not centralized and the low flexibility of prospective students to gain access to information. The purpose of this research is to develop a web-based new students information system at the Darunnajah Islamic Boarding School to make it easier for the registration committee to manage registration data for prospective students. The method used for this final project is data collection including problem identification, system requirements analysis, literature study, system design, implementation, and system testing. The results of this study are a system that is used to register online and manage registration data. The system has gone through the black box testing phase and shows the results that all the features contained in the system can run properly
