Abstract

The aim of this study is to determine the implementation of impulse buying among visitors at Duta Mall Banjarmasin. Impulsif is a buying decision made by customers on the spot after seeing the merchandise. This study used the quantitative research by spreading questioners to the visitors of Duta Mall Banjarmasin who shop about 100 orang. The method used in sampling is purposive sampling. Based on the pearson product moment r table with a significance level of 0.05, an rtable value of 0.220 was obtained, meaning that the job satisfaction variable was declared valid. The reliability test is declared reliable if the Cronbach's Alpha value is > 0.6. Based on the value of Cronbach's Alpha in this research variable, which is 0.760, it means that Cronbach's Alpha has been more than 0.6, so the indicators used to measure the employee job satisfaction variable are declared reliable. Based on data processing using arithmetic mean test with Likert scale measurement, it is known that the arithmetic mean test results on the impulse buying variable are included in the agree category with a score of 3.45. It can be seen that visitors at Duta Mall Banjarmasin agree to make unplanned purchases or impulse buying in terms of cognitive and affective aspects.
