

ABSTRACT

Metal Tobat Islamic Boarding School is a foundation in which it develops education based on Islamic teachings. However, the current student admission system still uses the conventional method, namely prospective students register directly by filling out the registration form prepared, so that the registration process does not run effectively and efficiently. The purpose of this research is to create a system that can be accessed anytime and anywhere by prospective students. This system can also assist new student admissions administrators in processing data on prospective students, data on selection results and new student data more easily, quickly and minimizes errors in data entry. Therefore, with a new web-based student admissions information system, it can produce a system that is fast, effective, effective and efficient. In order to support this research, the data collection method was carried out by observation and interviews. The process of this new student admissions system can help the process of inputting registration of prospective students, searching for data, and the system can minimize errors and can optimize data security. The results of this study can later help check data reports on prospective students who register, report student data received.
