

## **ABSTRACT**

*Warung Makan Pecak Belut Bu Niti is a simple food stall that serves the culinary specialty of Pemalang district, Central Java, namely pecak eel with shrimp paste. Pecak eel is a processed food in the form of fried eel and served with coconut milk sauce which tastes spicy, sweet, savory wrapped in coconut milk chili sauce. Recording of purchase and sales transactions at the Pecak Belut stall is still done manually and can be said to be inadequate, this often causes problems with cashier management and purchase and sales reports in end-of-month records or bookkeeping. So it often causes errors such as data duplication and takes a long time if you want to view purchase or sales reports. With these problems, an information system is needed that can help with the above problems. The implementation system development stage for the above problems is by collecting data, interviews and observation. System implementation using a web-based system that uses the PHP programming language. It is hoped that by creating this information system it can help employees in managing cashier transactions and bookkeeping.*
