ABSTRACT

CV Mediteg sells various health aids to suit consumer needs. Information regarding CV Mediteg's inventory in this case is considered less than optimal and is still done manually. Accumulation of data in the recording book can result in errors in recording and discrepancies between the data on goods in the book and physical goods. By building an Implementation of an Inventory Information System, it can make it easier for owners and employees to manage inventory data that is already stored in the database. The previous system was still done manually and recorded in a recording book. This system can provide solutions for inventory, the system can provide more accurate information in recording goods in and out, makes it easier to manage data on what goods will be ordered again if the stock runs out, can make reports monthly inventory of goods.
