ABSTRACT

The Laren District Religious Affairs Office, Lamongan Regency, is an agency that has the authority to carry out government duties regarding Islamic religious affairs. The marriage registration process at the Religious Affairs Office, Laren District, Lamongan Regency is still done manually. The aim of writing this final assignment report is to implement a Web-based Public Service Information System for Marriage Registration so that it can produce information regarding marriage registration at KUA quickly and can be reached without limitations of time, distance and place for prospective brides and grooms who want to register at KUA. The methods used in this research are data collection, needs analysis, data analysis, design, implementation and testing. It is hoped that the existence of a Public Service Information system for web-based marriage registration can help the KUA in processing data on prospective brides and grooms and make it easier for the public to register as prospective brides and grooms online at the KUA, Laren District, Lamongan Regency.
