

ABSTRACT

Bloomery Patisserie, is a company that runs a bakery business that provides custom cakes and decor classes for beginners who want to try making cakes. This company has a pile of data about the management of goods in the warehouse but does not yet have good data management, so it has difficulty presenting the information needed by the Owner and the warehouse division. Such as knowing the inventory of goods, incoming goods and outgoing goods in the warehouse. With advances in information technology as it is today, the need to provide accurate information is needed for the company's business development. In this case the Analysis and Design of a Web-Based Raw Material Management Information System is expected to be able to overcome the problems that are currently occurring at Bloomery Patisserie in raw material management so that it can assist in the development of the company's business.
