ABSTRACT

Boarding houses are a type of residence that is in demand, especially in urban environments. The need for easy and efficient access in searching for boarding house information is important for prospective renters. This research was raised because many students are still looking for a comfortable and affordable boarding house according to their wishes, even though many boarding houses are provided, but there are also those who only put up signs in front of their boarding houses or their apartments. Therefore, this application will provide boarding or rental information services. In this application there will be address, budget, picture and information features. With this application, it will make it easier for students, immigrants or families who are new to the area. This application was built using Visual Studio code using Android Studio as an Android display emulator.

Keywords: Boarding House, Mobile Application, Android Studio.
