ABSTRACT

Many activities that previously could be carried out face-to-face have become online or online by utilizing technology and information, ranging from learning, work and entertainment activities. Even though things are starting to improve now, face-to-face events are starting to appear little by little. Because people feel used to and comfortable with online habits which are considered more practical, people prefer to register, order or buy something online. Because of this, the author created this research to make it easier for event visitors if they want to buy tickets for events they want to attend, such as music concerts, Japanese festivals, workshops, seminars, etc. This application is made with a real-time database and can also make online ticket orders.

Keywords: *Event, Online, Register, Order, Codeigniter, Android.*
