*As technology develops, smartphones have become an option for learning needs. With so many types of regional language learning, it is of interest to most people from outside the region. Javanese and Sundanese regional languages are mostly in demand by people from outside the region. Based on the large amount of interest in learning regional languages, the Jasun Regional Language Learning Application is the choice of researchers. In this research, the SDLC method was used with a prototype model. By using the prototype model, writers and developers can find out the specifications of user needs in more detail and the prototype model is suitable for creating small applications. By building this Sundanese Javanese regional language learning application, it is hoped that it will make it easier for people who want to learn Javanese and Sundanese regional languages. That way, to learn Javanese and Sundanese regional languages, you don't need to come directly to those areas. Simply by using a smartphone as a medium for learning Javanese and Sundanese regional languages, it can be done anywhere and anytime.*
