**ABSTRACT**

*The web and mobile based inventory system aims to make it easier for company owners and employees to check incoming goods, outgoing goods, stock of goods and make reports. CV Panca Yoga is a company engaged in buying and selling cassava which was founded in 2012 on Jalan Raya Kejobong, Krenceng, Purbalingga, Central Java. The process of collecting data on stock of goods at CV Panca Yoga can be said to be less efficient and effective because everything is still done manually, starting from the process of recording incoming goods, outgoing goods, stock inventory, and making goods reports. After knowing the existing problems, a web and mobile based inventory system application was designed which aims to make it easier to input data on incoming goods, outgoing goods, stock of goods and making reports which are no longer done manually and can take place more quickly and efficiently and can reduce the level of errors that may occur. With this in mind, in writing this final assignment the author took the title "Mobile and web-based cassava processing inventory system at CV Panca Yoga".*
