PRESENCE SYSTEM USES WEBSITE-BASED QR CODE

ABSTRACT

SMK 1 SRAGI is one of the schools in Pekalogan Regency that still uses a manual attendance process. In the process of student teaching and learning activities, a daily attendance process is required to process student attendance data which will be created as a presence report which is one component of the assessment of the teaching and learning process. In implementing the manual attendance system carried out by students, there are still shortcomings in terms of time efficiency in the process of recording attendance and preparing attendance reports for each class. In designing the presence system, QR Code is used in the form of web based and uses the PHP programming language with MySQL database processing. This research aims to build a attendance system using QR Code as a media for inputting student absence data and making daily attendance reports for administrative staff students easier with the presence system that has been built.
