ABSTRACT

Internet Learning Cafe is a cafe that sells food and drinks along with cafe ingredients on Jl. Admiral Adisucipto No.26, Ambarukmo, Caturtunggal, Kec. Depok, Sleman Regency, Special Region of Yogyakarta. Many people enjoy coffee, various foods and other drinks. But sometimes consumers only want to buy coffee or ground powder that is used at the Internet Learning Cafe, which can then be processed by themselves at home without having to come to the Internet Learning Cafe first. The solution to this problem is that an online sales information system design is needed. To make payments online, consumers can then buy goods from the website then carry out the payment process, then the goods can be picked up at the café. Design is used to help design applications that will be used for online sales. This application development uses the Waterfall method starting from analysis to support, and each process has its specifications. The Sales Information System is a solution for those who want to serve coffee or non-coffee at home, and can be resold in the form of ready-made or raw drinks. The information presented on this website includes information about Internet Learning Cafes, sales of cafe raw materials, and Internet Learning Cafe profiles.
