This research entitled “An Analysis of Code Mixing Used by Black in News Presenters” is intended to find out the form of code mixing used by Black in News Presenters; and the probable reasons of using code mixing by Black in News Presenters.

The writer analyzes type of code mixing based on Arifin's theory. This research belongs to a qualitative research. The research produces descriptive data in a written form. The object of this research is code mixing in the Black In News TV program. The data were collected by writing the transcript of the show. After the data were collected, they were analyzed and classified into forms and the probable reasons of using code mixing.

The results show that the forms of code mixing were code mixing in the form of word, phrase, repetition of word, hybrid, idiom and clause. The results of the analysis reveal that there are 185 points of code mixing. The number of each form is; 65 points of word, 40 points of phrase, 26 points of hybrid, 1 point of word repetition, 5 points of idiom, 48 points of clause. The probable reasons for using code mixing are being no suitable translation in Indonesian, situation around the presenters and to be more impressive.

Key words: television program, forms, probable reason
