ABSTRACT

Lack of knowledge of pregnant women about what to do and what not to do during pregnancy can threaten the life of the fetus and the pregnant woman herself, so it is necessary to consult a doctor to get information about the pregnancy process. However, to conduct a direct consultation there are still problems such as a fairly long distance, uncertain time, and the health of the pregnant woman herself, so it is necessary to create an Android-based Pregnant Women's Health Learning and Consultation Application Before Giving Birth. By using this application, it can make it easier for pregnant women to get information about their pregnancy and if there is a problem during pregnancy, they can consult directly with a doctor through the application.

Keywords: *health, pregnant women, learning, consultation, application.*
