ABSTRACT

Cahaya Komputer is one of many companies engaged in computer sales and services. Cahaya Komputer currently has not implemented a computerized system in its computer sales and services. The problem in this study is how to design an application for managing computer sales and services. The researcher designed an application to provide a solution to this study, the application designed is an application for Android devices. Android is an open source operating system based on Linux that runs on mobile devices such as smartphones and tablets. The hope for the results of this study is that researchers can design an Android application that can help the process of buying and selling computer devices and accessories. This application also aims to record orders and develop customer service.
