The purpose of this research is to understand and analyze the impact of the regional revenues to economic growth of Bantul district. The research used secondary data from realization of revenue and expenditure of the Bantul district for the years 2005-2015. The data was analyzed by correlation analysis method.

The results of the research shows that the correlation of the pearson value about regional revenues to economic growth is  $-0,638$ , means that the correlation of the regional values is on the opposite side of the economic growth. The significant value regional venues to economic growth is  $0,009 < \alpha = 0,05$ , then  $H_0$  is rejected and  $H_a$  accepted. This means that the regional value have a significant effect on economic growth. And the size of the coefficient of determination between regional revenues and economic growth is  $0,0499$  or  $49,9\%$ . That's mean the regional revenues can be explained by economic growth amounted to  $49,9\%$  and the remaining  $50,1\%$  came from other factors are not examined in the analysis method.

*Keyword : Regional Revenues, Economic Growth*
