

Abstract

Casta Coffee located at Jl. Ki Ageng Pemanahan No. 31, Yogyakarta is a coffee shop selling beverages of different kinds of coffee. The problem is that the current systems of data management on selling and stock supply inventory are not yet well maintained. It often happened that noted data on materials are not similar to the supply stock.

The research was carried out by observation and personal interviews with the management of Casta Coffee to initiate information systems selling and stock inventory which can manage selling transactions, receipts for the customers and material supplies. The system created was based on Desktop using Delphi Language Programming and database MySQL to manage all data and transactions stored better.

The designed system can manage selling transaction data, printing receipts for the customers, and reports on materials stock supplies.

Key words: Information System, Selling, Material Supplies
