

ABSTRACT

Dr. Xiaomi Bike Store is a bicycle shops in Yogyakarta. Its purchase process still uses a conventional process. Customers are coming directly to the store for purchase transactions. The recording sales reports also still use books and archives to record customer data. It is vulnerable to loss due to fading of writing due to wet, burning, and torn. The development of technology is currently growing rapidly, such as the advanced of internet technology in the field of E-Commerce. The purchase transaction process; prospective consumers are living away from the store, the limit of spare part backup become a problem for the store. Therefore, the researcher developed a web-based E-Commerce information system using the PHP programming language and MySQL as the database. The method used in writing this report is conducting a survey of the current system, conduct interviews and observations, and collect data to obtain the required information. The results of the design and manufacture of this application are expected to be useful to solve company problems in the sales process.
