

ABSTRACT

New-student's admission data arrangement in Muhammadiyah 1 Mlati, Sleman, Yogyakarta is still conducted conventionally, which the candidate must come directly to the registration desk and then fill in registration form. Later on, registration data is noted on books and reports also uses conventional recap, so that, the archive can be lost and the time used to make report is quite long. With the problems, so it is required online information system in admission for new student uses Quick Response Code (QR Code) technology, so that, the student does not have to come directly to the registration desk and also facilitates the staff to make report. As for research method used in this research is interview, library review, system design, system implementation, and system trial. With this research, it helps student candidate in registration and assists staff to manage admission data in the school.
