

ABSTRACT

CV. J-Network is a company engaging internet installation and CCTV, the company is growing if it is seen from the annual sales every year, then it requires order service to support sales and deliver better service. In designing the information system, it uses Systems Development Life Cycle (SDLC) research method. Tools used to describe system model is Context Diagram and Data Flow Diagram (DFD), also to design data base using Entity Relationship Diagram (ERD). To support the information system works well, it is required supporting component. They are PHP programming language and MySQL as database server. With the information system, it is expected to ease CV. J-Network to promote their products and simplify online sales transaction, so that, it can be done anytime and safe as well as ease the data management and report.

Keywords: Information System, Sales, transaction.
