

ABSTRACT

PT. Westapusaka Kusuma is a limited liability company engaged in manufacturing clothes (garment). PT. Westapusaka Kusuma is located in Magelang KM. 16 St. Kemloko Caturharjo, Sleman. In every company, especially Garment Company, they must have data management system for its goods. To manage product data, they must have a great system to support all activities carried out by the company in order to get maximum result. However, the problem is that recording material is still conventional; warehouse operators must always record manually every incoming material, outgoing material, returning material, finished product, manufactured product, sending product or distribution, so that, it may make errors in recording or the risk of losing product's form. Therefore, the purpose of this research is to create a web-based goods management information system to make it easier for the warehouse operators and warehouse managers in recording process and monitoring material data, goods data, and making reports, so that, it can save time and managing data properly and optimally.
