

ABSTRACT

Djoglo Moeljo Art is a business that is engaged in the production of goods. With the existence of production management transactions and sales transactions, this business can develop. However, this business has some difficulties in handling the management of the production and sales process so that the authors formulate several problems regarding how to manage raw material purchase transactions, production processes, ordering goods to selling goods and providing reports that aim to recapitulate for owners. This study aims to help manage the production and sales processes by creating a web-based production information system media as information media that can be accessed by admins and owners anywhere as long as there is an internet connection so that the management of the production process to sales can be monitored at any time without having to come to the place. production. It is hoped that the production information system can provide benefits by providing easy production management information for admins and owners to make purchase transactions, production processes to sales transactions at Djoglo Moeljo Art easily and quickly and can assist owners in providing decision-making support by viewing reports generated by the system.
