ABSTRACT

The Topscorejogja shop is a shop that sells various kinds of sports shoes, including futsal and soccer shoes, besides selling shoes, this Topscorejogja shop sells sports accessories. This store has a problem, namely in promoting products and customers who purchase products must come directly to the Topscorejogja Store, thus it will take a long time. From these problems, the researcher aims to be able to produce and build a system that can provide convenience in making transactions, making reports and providing information for customers in finding a product that is needed. The method used is system analysis, design, implementation, testing and maintenance. This researcher produces a web-based sales information system that makes it easy to provide information on products sold, sales transactions, purchases and reports quickly and accurately.
