ABSTRACT

The management of rental data at the ARIFIN TENT RENTAL STORE Yogyakarta experiences several problems such as ineffective and inefficient data input, difficulty in finding data according to the information required, difficulty in providing information quickly to customers and storing data reports on party equipment rental and poorly organized tents. The purpose of writing and compiling this final project is to build an information system for party equipment and tent rental on the ARIFIN tent rental into the website, so that party and tent rental transactions can be done online and make it easier for customers to get information on party tools and tents to be rented. availability of party equipment, and information about ARIFIN tent rental without having to come to the place. The programming languages used are PHP, CSS and HTML and MySQL database.

Keywords: Information System for Party Equipment Rental and Tent Rental, PHP and MySQL.
