ABSTRACT

Miftahunnajah Islamic Boarding School (M-IBS) is an educational institution under the auspices of the Pelita Umat Yogyakarta Foundation which was founded in 2010. At the Miftahunnajah Islamic Boarding School, there is a problem that the alumni data has not been recorded accurately and neatly. Alumni data collection is by filling out the biodata sheet and then inputting it into Microsoft Excel. This causes an error in the input process; data becomes scattered and there can be accumulation of documents. The Miftahunnajah Islamic Boarding School is not yet a place to share information and communicate for alumni, such as information on job vacancies, there is no discussion forum available and alumni have not been able to find out information between alumni. Therefore, through the creation of the Santri Alumni Information System, it is hoped that it can assist in managing alumni data and become a medium of communication and exchange of information. Presentation of information in the form of a web will make the system more organized, faster and accessible online. The software used in building this system is MySQL as a database, Xampp as a web server, Sublime Text 3 as a support. This alumni information system is a system that provides convenience in managing alumni data as well as being a medium of communication and exchanging information easily, providing updated alumni data information, making it easier for alumni to conduct discussions, making it easier to convey job vacancy information and making it easier for alumni to register for jobs.
