

ABSTRACT

Sales and inventory of goods are the most important things in business activities. From sales and inventory, records can be made to find out some information about the business activities carried out so that it can produce useful reports. With information technology, a useful information system can be designed to simplify sales and inventory activities of a business. This study aims to determine the current sales system and inventory of goods. The result of this research is a computer-based sales and inventory information system that has been designed. From the results of the research, Dum Thai Tea still uses a manual recording system where in manual recording there are still frequent errors and also the recording process takes a long time. Therefore, "Web-Based Sales and Inventory Information System" can make it easier to record and process the input data to produce reports that are useful in decision making and business development.
