

## **ABSTRACT**

*PT. Prasido Dwijaya is a car rental service business in the Special Region of Yogyakarta. PT. Prasido Dwijaya provides car rental services with a calculated rate per day or even per month. This car rental service can use a driver who is an addition to the services of this PT or it can also be without using a driver. The process that occurs in the implementation of renting a car between PT. Prasido Dwijaya by telephone to inform him of his destination which is to rent a car. From this process there are problems in terms of rental time, type of car and system of fines. Design and build a car rental management system can make it easier for owners to manage rentals, fine rates. Meanwhile, users who want to rent can see the type of car and its price details based on the website.*

*Data collection methods used were observation, interviews, and literature study methods. Making this system using PHP as the script language used to create website pages, the Codeigniter Framework produces a neat programming structure, both in terms of code and php file structure and MySQL as a database where data is stored.*

*Keywords: Car Rental, Management, Website.*
