

## **ABSTRACT**

*PO. Eddy Transport is a tour bus rental service for routes throughout Indonesia, especially in the islands of Java, Sumatra, Bali and Lombok, with services served as a top priority, namely regular tour trips, religious tours, industrial visits or tailored to customer needs. Currently PO. Eddy Transport does not yet have an efficient, effective and accurate bus ticket booking and payment system. It is hoped that with this information system these problems can be resolved. Payment gateway is one of the technologies used to facilitate ordering and payment of the midtrans online payment gateway on the bus service. The software used in building this application is PHP (Pear Hypertext Preprocessor) as a programming language, MySQL as the database server.*

*Keywords: Bus, online booking, online payment, payment gateway, midtrans.*
