

ABSTRACT

Yogyakarta City Library is one of the libraries located in Yogyakarta, which was officially established on May 2, 1993. The Yogyakarta City Library is quite popular because it has many book titles available. The number of books that are quite large and the number of visitors to the library every day makes the amount of data on borrowing from the Yogyakarta city library even bigger. The goal to be achieved in this final project research is to develop an application by implementing a client-server system to manage data contained in the Yogyakarta city library. The result of this research is a client-server based library system which aims to facilitate the library in processing Yogyakarta city library data.
