

ABSTRACT

This study aims to improve the quality of services provided by the Sound Partners. Mitra Sound is a company engaged in rental services. Mitra Sound offers rental services for various party equipment products such as tents, sounds, tables, chairs, buffet utensils, plates, glasses and other celebration equipment. Mitra Sound rents out the necessities of weddings, school farewells and other events. In implementing its work, the system that is currently running at Mitra Sound is still using a manual system, such as the user having to come directly to the place to order any tools to be used. This will make it more difficult for users who are far from the place of order. Another obstacle is that users cannot meet the owner because they are not there. The whole process caused some problems in time efficiency and difficulties in leasing. With these problems, the researchers made "Implementation of Party Equipment Rental Information Systems at Mitra Sound Kebumen". This system can make it easier for users to get information and rent party equipment, especially for users who are far away. This system is equipped with a payment feature using the Midtrans Payment Gateway. This system is built using HTML, PHP and MySQL.
