

## ***ABSTRACT***

*SPP is an Education Development Contribution which is a monthly fee (usually) paid by students to schools as payment for educational services obtained. SPP is paid in a period of one month, where this payment will be charged to students from educational institutions to help facilitate the learning process. Payment at SMK Maarif NU 01 Karangobar is still done manually by recording on the payment card and recapitulating it on the ledger. This is less effective and the error rate is still high. Seeing these problems, we need a system that can help in the tuition payment process and recap if needed one day. The system created is a payment gateway-based SPP payment system. This study aims to assist parents and students in paying tuition fees.*
