ABSTRACT

Hiking is one of the choices people usually make when seeking new activity, especially for Students. People can go hiking together or alone. Hiking is an activity that needs hiking gear. However, the lack of gears for hikers often becomes the most crucial problem. RAC adventure is a store that provides gears for hiking activity. The research aims to provide a better method to manage, promote, sell the gears, and help with calculation and reports for RAC Adventure. Sales System of hiking gear's shop is designed to ease managing items, promotes, calculation and reports. This system was member-based developed using PHP language and integrated API. The review was expected to upgrade the quality and management for RAC Adventure.
