ABSTRACT

Goods supply is the one that stored for sales or uses in the upcoming or near future. Stored before use or put into the production process. The Wiranggono trading business that is running it still uses the system manually, so it often has difficulty processing data, ranging from inventory updates, ordering goods, recording data items, and storing data relating to inventory until the report is made. Wiranggono trading business is a shop that is engaged in fashion. Therefore, the wiranggono trading business conducts business activities in inventory. The purpose of making this inventory system is to obtain a valid inventory system development process to minimize errors, inaccuracies, and loss of data on the stock inventory of goods. Information systems in an organization can provide information for all levels in the organization whenever needed. This system stores, retrieves, changes, processes, and communicates information received using information systems. The results of this e-commerce development can facilitate customers. In obtaining information, through product purchases, payment confirmation is automatic without the need for admin confirms and can be accessed online to make it easier for customers who make purchase transactions quickly, effectively, and efficiently.
