**ABSTRACT**

*Vicky Photo Studio is a company engaged in photography, wedding, prewedding, photo studio, graduation photos and much more. Vicky Photo Studio wants to use internet technology to market its business. Because so far, customers have not received complete information about the photo packages offered by Vicky Photo Studio. In addition, other problems in making transactions, customers have to contact via Whatsapp. It is pretty time consuming because Vicky Photo Studio cannot reply to messages from customers quickly while busy doing photo sessions. Therefore, a web-based photo service reservation system is needed so that consumers can find out complete information on photo packages offered and can place orders online. The tests carried out using the black-box testing method, as many as 31 scenarios obtained valid results. This system can run well by providing pop-up messages, if an order occurs on the same date and time, and during the input process, update and delete data, to The conclusion of the results of making this system, the system can make online ordering transactions, and the payment gateway payment process can work well.*
