ABSTRACT

Permata Bunda Early Childhood Education and Roudlatul Athfal II Kindergarten Bengkok Jepara are schools that are developing both in terms of quality of education and quantity of students. In Permata Bunda Early Childhood Education and Roudlatul Athfal II Bengkok Kindergarten, the problem is that the selection of new students is carried out in a way that is, parents or guardians of prospective students come to school and bring the requirements, then pay the administration and fill out the registration form. So, the need for a new student admissions information system and web-based financial administration is expected to facilitate its use to access it. In designing this system, it is web-based using PHP (PHP: Hypertext Preprocessor) as a programming language, and MySQL as database storage.
